

COYOTE® SPLICE TRAYS

COYOTE Splice Trays are necessary components within most COYOTE fiber optic closures to manage, store, and protect fibers and splices. COYOTE splice trays are injection molded and have hinged, clear plastic covers to protect and allow for visible inspection of the fibers. They are available in Legacy and LITE-GRIP® styles, each providing unique features and benefits to best fit the fiber management and splice capacity requirements of the closure. Both splice tray styles come in short and long versions for either single fusion or mass fusion/ribbon splicing. Short splice trays are used in the COYOTE In-Line RUNT, ONE, Terminal Closures, 6.5" x 17" Dome Closure, 9.5" x 19" Dome Closure, and COYOTE GLC 17". Long splice trays are used in the COYOTE 6.5" x 22" Dome Closure, 9.5" x 28" Dome Closure, and COYOTE GLC 28".

FEATURES AND BENEFITS

Legacy Splice Tray

- Routing channels allow fibers to enter the splice tray at the same entrance point, allowing buffer tubes and transportation tubes to coil easy within the closure
- Buffer tubes or transportation tubes are secured to the splice trays with felt and tie wraps
- Available in low profile, standard, and deep profile heights to achieve the desired splice count within the closure

LITE-GRIP Splice Tray

- Routing channels of the splice tray accept LITE-GRIP Retention Sleeves that are designed to grip buffer tubes, pigtails, or transportation tubing without the possibility of attenuation during installation and eliminates the need for tie wraps, reducing installation time
- Removable splice blocks provide the flexibility to interchange splice blocks to store single fusion splices, mass fusion/ribbon splices, mechanical splices, or PLC splitters on the same splice tray
- Available in low profile, standard, and deep profile heights to achieve the desired splice count within the closure

SLEEVING AND TUBING KITS FOR CABLE MANAGEMENT

The COYOTE closures are designed to manage a variety of fiber optic cable types.

Buffered ribbon cables are stored and routed in the side storage brackets or buffer tube brackets of the organizer. Cables with pliable subunits can take advantage of the large bend radius created by these side storage brackets and store expressed subunits without having to be concerned about tube fatigue. In addition, this style of tube can be routed directly to the splice trays. Rigid tubes need to be broken out and transitioned to the splice trays. This can be accomplished with either expandable braided sleeving or split braided wrap.

Expandable Braided Sleeving

Ideal for cut cable applications

Split Braided Wrap

Ideal for expressed cable applications

If needed, the Wire Loom Insertion Tool (**Catalog Number: 80813518**) can be used to install the split braided wrap onto the bare fibers/ribbons.
